SUMMARY

Software developer with experience building and deploying real-world systems used by students and institutions. Strong in object-oriented programming, data structures, and full-stack development. I work effectively in teams to identify real-world problems and build reliable, scalable software solutions, including payment platforms and real-time execution systems. .

EDUCATION

Muthoot Institute of Technology and Science

Bachelor of Technology - Computer Science and Engineering

St Joseph's HSS Pullurampara

12th

kochi, India

2024 - 2028

kozhikode,ndia

2022 - 2024

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python, C, C++

Frontend & Web: Next.js (React), HTML, CSS

Backend & APIs: Node.js, Flask, REST APIs, WebSockets

Databases: PostgreSQL, MySQL, SQLite, MongoDB

Authentication & Security: JWT, NextAuth, bcrypt

Storage & Cloud: Google Cloud Storage (Buckets), Cloudinary

ORMs & Dev Tools: Prisma, Git, GitHub, Docker, Postman

Deployment & Platforms: Vercel, Render, Linux

PROJECTS

MITs Print – Online Printing System with Payment Gateway Integration [Link](#)

Tech Stack: Next.js 15, NextAuth, PostgreSQL (Neon), Prisma, Razorpay, Python, Vercel

- Designed and deployed a full-stack printing platform to eliminate long queues and manual order handling at the college print store, especially during semester-end and lab submission rush.
- Implemented secure authentication using NextAuth and enabled online payments through Razorpay to allow students to place and pay for print orders remotely.
- Built a PostgreSQL-backed order management system with Prisma ORM to track documents, payment status, and print jobs in real time.
- Automated PDF processing and print-ready file generation using Python, enabling the store to receive organized, ready-to-print orders.

Hostel Room Allotment System [Link](#)

Tech Stack: Java, Java Swing, SQLite (JDBC), Desktop Application

- Built a secure and stable desktop application to automate hostel room allocation for educational institutions, replacing error-prone paper-based processes.
- Implemented room assignment logic based on student preferences, academic year, and availability to ensure fair and organized distribution.
- Developed and tested the project as part of a team, ensuring reliability, data integrity, and smooth operation in real-world hostel environments.

Code2PDF – Realtime C Compiler & PDF Generator [Link](#)

Tech Stack: Python (Flask, Flask-WebSocket), C compiler, PDF Generation, Render(hosing)

- Built a web-based platform that allows students to write, execute, and convert DSA lab C programs into professionally formatted PDFs for record submission.
- Implemented real-time terminal communication using WebSockets to stream compilation output and program results from the server to the frontend.
- Eliminated the manual workflow of copying code into Word and exporting to PDF by generating print-ready documents directly from executed C programs.
- Designed a two-column PDF layout to reduce printing costs while maintaining clear code readability for academic records, and deployed the system on Render for student use.
